## ANTIMICROBIAL TREATMENT SERVICES

ANTIMICROBIAL, ANTIBACTERIAL, DISINFECTANT AND ODOR FREE, RESTROOM TREATMENT SERVICES.

icleangogreen an innovative solution for restroom odor control .

An antimicrobial kills microorganisms or inhibits their growth.

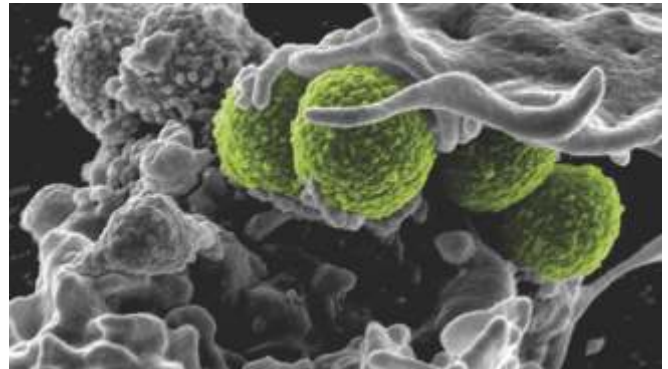

We share our worlds - home, work, school, and everywhere else - with all sorts of visible and invisible creatures. There are ways to protect ourselves and those we love from the "creatures" that tend to make us sick without undermining our long-term health, or the health of our environment. Dry steam vapor break through an organism's cell walls and destroy the nucleus. The chemical-free, low-moisture heat is safe for all surfaces , safe , yet the technology is proven to be lethal to mold, mildew, dust mites and germs including MRSA, salmonella, type-A influenzas including H1N1, and staph among others. The dry steam vapor also has the ability to penetrate the microscopic pores in every surface and disinfect inside these pores, where even the strongest topical cleaners cannot reach.

### WHY DOES REST ROOM HAVE STRONG ODOR?

The urine changes from an acid to an alkaline and the alkaline salt attracts more moisture, which allows bacteria growth process to renew. This process will continue and cause a stronger odor until the bacteria is destroyed. The high pressure steam machine destroys bacteria and help to maintain odor free restroom. An antibacterial and disinfectant agent.

## FOAM TEC REST ROOM DEEP CLEANING AND SANITIZING TREATMENT

95% of consumers surveyed said they would avoid an establishment in the future if they found the restroom to be dirty. Your employees and customers deserve clean, sanitized restrooms. Your restroom is as much a part of your company as your conference room, sales area or dining room. Cleaning and sanitizing public restrooms is an important problem worldwide, which has not found yet an optimal solution. Cleaning means removing the visible dirt from all surfaces, while sanitizing means removing not only visible dirt, but also invisible elements like bacteria, which can be responsible for disease transmission. This means that even after cleaning, a truly clean washroom should be periodically sanitized. With icleangogreen Antimicrobial Treatment Services provides innovative and patented systems for cleaning and sanitizing public restrooms of any type and size. By using specially designed machines, instead of manual work only, icleangogreen Antimicrobial Treatment Services consist in using a unique machine to spray all the surfaces with a chemical solution, rinse the surfaces after few minutes with high pressure water washer. Restrooms are completely cleaned and sanitized in a short time, with excellent and granted results. It is finally possible to reach a higher level in restroom's hygiene.
